

March 24, 1975

note you are going to hire three people to administer the law, now could you respond just briefly first of all to administer the law....or rather funding and secondly to the people that would be hired.

SENATOR SIMPSON: First of all I think that the legislation would be self sufficient in the money generated from the mobile parks would cover the cost of it. Now, the department of health at the present time is required to investigate and check mobile parks. I think that we would find that they do very little of it because they don't have personnel and they don't have money to hire. Under this the additional money would be for the purpose of people doing the checking primarily.

SENATOR MARVEL: Now the checking would be done on a local level, there would be a fee charged and that fee would go into a cash fund. Is there a cash fund set up in the bill to handle the receipt of this money?

SENATOR SIMPSON: That is a good question that I don't have a good answer too.

SENATOR MARVEL: But that is the way it ought to be, right?

SENATOR SIMPSON: Yes, it would have to be that way yes.

SENATOR MARVEL: Alright, thank you.

PRESIDENT: Senator Kennedy.

SENATOR KENNEDY: Just briefly, I agree with Senator Cavanaugh on this particular amendment, if we are still talking on the amendment. I know that the local people will furnish in all instance electrical wiring if they are setting up this type. I'm not sure about the entire bill, we had to find out if there was reason for the bill, if we had some problems in certain areas, we did not find them. I'm sure that I would like to see if there was a problem in any instance for this amendment. I just can't believe that anyone would set up a trailer set up of this type in this day and age, without probably certainly providing electrical heavy wiring. The local control of course would have an opportunity in their rules and regulations to see that this wiring was satisfactorily. I certainly would oppose the amendment.

PRESIDENT: Senator Mills.

SENATOR MILLS: I Mr. President, I would like to pose a question to Senator Simpson. Senator Simpson when you or someone who helped you draw up the amendment, namely NPPD, why did you...

SENATOR SIMPSON: I drew up the amendment..

SENATOR MILLS: OK, I'm sorry. Why did you bring in 20%? Why not 50% we are in an area of energy currents, if we are concerned about that why not 50%, why not 10%? Why 20%? Why is that the magic figure?

SENATOR SIMPSON: I guess it is because I drew it up. I just picked a figure and I thought that maybe 1/5th wasn't too bad.
